## PHASE:1

### PROBLEM STATEMENT:

According to the flood disaster in the area of Chennai and so on. On the recent years the people suffer from food security, they can't even live inside their home as the place of their homes and streets are completely flooded by water.

The people prone to be attacked by many diseases that arises from the dirty and uncleaned water and they become so ill.

The people can't go to anywhere,they became to restricted by the floating water.

They suffered from inscarcity of food and their livelihood is affected.

If to avoid this problem we decided to do the project of flood monitoring and early warning.
