FLOOD MONITORING AND EARLY WARNING SYSTEM

TEAM MEMBERS:

- 1.JAYA MAHA VARSHINI.S(au951221106014)
- 2.RAMYA.G(au951221106031)
- 3.KALPANA DEVI(au951221106017)
- 4.RISWANA FATHIMA(au951221106034)
- 5.THANGADURACHI(au951221106050)

PHASE 2:INNOVATION

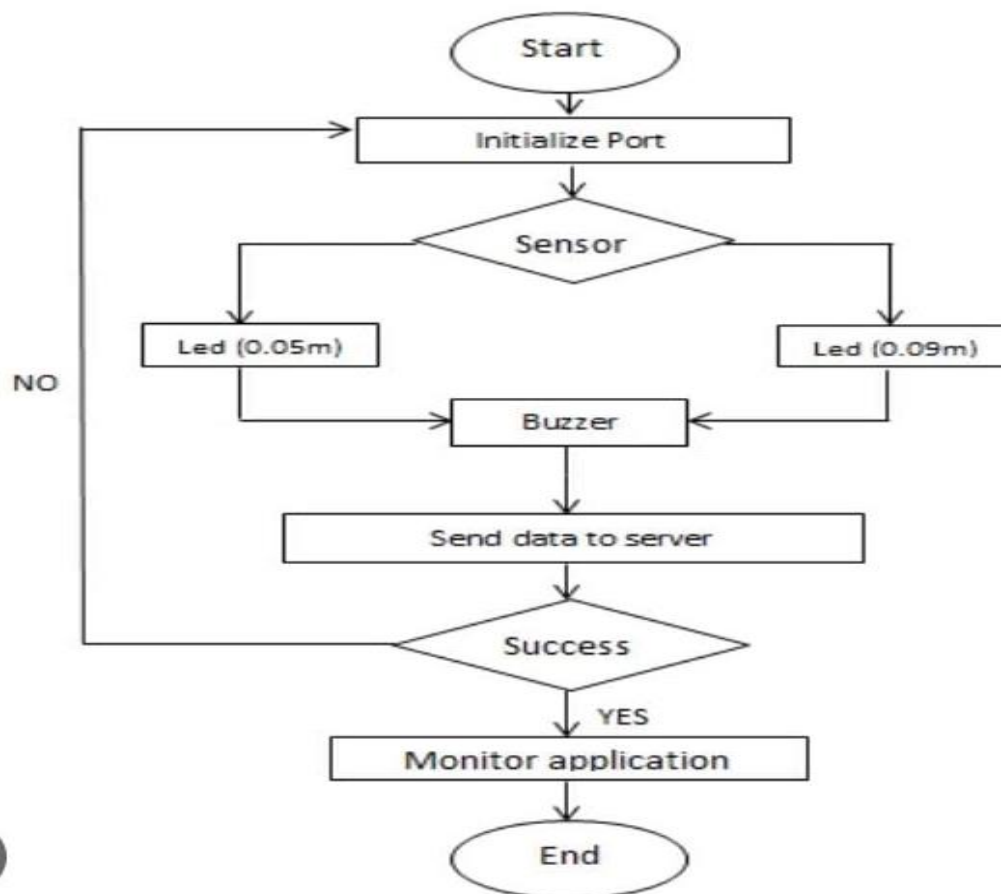

IMPORTANT NEEDS OF FLOOD MONITORING AND EARLY WARNING SYSTEM:

Flood monitoring and early warning systems are essential to mitigate the risks of flash floods and glacial lake outburst floods. These systems can help in predicting the occurrence of floods and provide timely alerts to the authorities and people living in the affected areas

A flood early warning system typically consists of monitoring, modeling, risk analysis, decision-making, and warning. The key elements of an early warning system include risk knowledge, monitoring and warning services, dissemination and communication, and response capability .

Advanced tools for flood management are also being developed to improve early warning systems.

BLOCK DIAGRAM:

SOLUTIONS:

Early warning systems can help reduce the loss of life and property damage caused by floods. They can provide timely alerts to authorities and people living in affected areas so that they can take necessary precautions. Flood monitoring systems can also help in predicting the occurrence of floods by monitoring weather patterns, water levels in rivers or lakes, soil moisture levels, etc. This information can be used to generate accurate flood forecasts that can help authorities prepare for potential disasters

Implementing a flood monitoring and early warning system project can have several advantages such as reducing loss of life and property damage caused by floods, providing timely alerts to authorities and people living in affected areas so that they can take necessary precautions, predicting the occurrence of floods by monitoring weather patterns, water levels in rivers or lakes, soil moisture levels etc., generating accurate flood forecasts that can help authorities prepare for potential disasters.

MODEL:

CONCLUSION:

Thus the solution was created by the innovative design of the flood monitoring and early warning system.
